Professional Summary

B.Tech. Electronics and Computer Science Engineering student at KIIT University (CGPA: 8.36/10.0) with 1+ year of internship and technical project experience across software development, data-oriented engineering, AI, and IoT systems. Strong foundation in **Python for data analysis**, **SQL-based data querying**, data preprocessing and noise filtering, with growing exposure to **Power BI for data visualization and analytical reporting**. Experienced in end-to-end technical project delivery, integrating software, ML models, APIs, and embedded systems. Explored **AWS, Azure, and GCP** with an interest in technology-led business transformation and application/data modernization.

Professional Experience

AI Course Helper – Agentic AI Learning Assistant

Agentic AI Chatbot Developer

- Built an agentic AI chatbot that teaches specific academic courses through interactive, course-focused conversations and guided learning support.
- Designed the application around LLM-driven agentic workflows to interpret learner queries, provide contextual explanations, and support step-by-step course learning.
- Developed the project end-to-end, covering application logic, AI interaction flow, prompt design, testing, and user-facing learning experience.

Independent Project

2026

AICTE EduSkills & AWS Academy

Generative AI Virtual Intern

- Worked with enterprise Large Language Models, prompt engineering, and AWS Bedrock to design and evaluate cloud-based generative AI workflows.
- Explored end-to-end AI solution workflows, model evaluation, and practical cloud deployment considerations for enterprise use cases.

Remote

Oct 2025 – Dec 2025

Cognifyz Technologies

Front-End Development Intern

- Developed responsive web interfaces using React.js, HTML5, and CSS3, improving page rendering speed by 15%.
- Built reusable component libraries and modular UI patterns, strengthening structured software development and end-to-end implementation skills.

Remote

Aug 2025 – Sep 2025

Selected Technical Projects

Neuro-Scribe – Brain-Computer Interface (BCI)

Jan 2025 – Jan 2026

Python, Machine Learning, Signal Processing

- Built a real-time EEG signal-processing pipeline that translated neurological telemetry into text commands, achieving 91.5% classification accuracy.
- Applied data preprocessing and ML-based noise filtering to noise-heavy neurological signals, reducing signal noise by 35% and improving downstream classification quality.

Wireless Air Mouse & Radar System

Jan 2026 – Mar 2026

ESP32, MPU6050, Embedded C, Python

- Engineered a gesture-driven input system using IMU sensor fusion on ESP32 with under 12ms response latency.
- Developed Python execution scripts for real-time motion translation and high-precision cursor tracking from sensor data.

Personal Developer Platform

Apr 2026 – May 2026

React.js, Vite, Tailwind CSS, Netlify

- Designed and deployed a production portfolio platform with custom DNS, SSL security, and a 98+ Google Lighthouse score.
- Handled implementation, deployment, performance optimization, and technical configuration across the full application lifecycle.

Education

KIIT University

Bhubaneswar, Odisha

B.Tech. in Electronics and Computer Science Engineering – CGPA: 8.36/10.0

2023 – 2027

Coursework: Data Structures & Algorithms, Computer Networks, IoT Architecture, Software Development.

Pathfinder Higher Secondary Public School

West Bengal, India

Higher Secondary Certificate (Class XII) – 76.2%

2023

Blooming Dale Academy

West Bengal, India

Secondary School Certificate (Class X) – 85.0%

2021

Technical Skills

Data Analysis & Analytics: Python, Pandas, NumPy, data preprocessing, exploratory data analysis, signal/data noise filtering, analytical problem solving

SQL & Data: SQL, MySQL, intermediate querying, filtering, aggregation, joins, subqueries, data extraction and transformation

Data Visualization: Power BI (currently exploring), dashboard design, analytical visualization, reporting

Cloud Technologies: AWS (explored), Microsoft Azure (explored), Google Cloud Platform / GCP (explored)

Programming: Python, C, C++, Java, JavaScript

AI / ML: Scikit-learn, TensorFlow, OpenCV, ML inference, signal processing, Generative AI, AWS Bedrock

Web & APIs: React.js, Vite, Tailwind CSS, REST APIs, HTML5, CSS3

IoT & Embedded: ESP32, MPU6050 sensor fusion, Embedded C, Arduino IDE, circuit design

Tools & LLM Development: Git, GitHub, Claude Code, Codex, LLM APIs, Postman, Figma, VS Code, Netlify, Hostinger
